

FREQUENTLY ASKED QUESTIONS

TAYLORS AVENUE, MORPHETT VALE ROAD RECONSTRUCTION AND TRAFFIC CALMING

What is the timing of this project?

Stage 1 Road Reconstruction: Work is scheduled to commence mid-September 2021 and be completed by December 2021.

Stage 2 Traffic Calming: This is advance notice only as the project is still within the design stage. A commencement date has not been scheduled as yet.

Why does the road need to be reconstructed?

The current road pavement has suffered from reactive soil movement leading to cracking, undulations, pavement failures and water pooling, and therefore requires reconstruction.

Will I be able to access my property during reconstruction?

Prior to and during construction, our staff and nominated contractors will consult with affected residents to ensure that they are not unduly inconvenienced and that access to properties is maintained.

Any necessary closures will be temporary and in consultation with the affected residents.

Will my commute be delayed by the reconstruction?

Access will be maintained for local traffic only, however there will be traffic controls in place at various stages of the work, so it is inevitable that some delays will occur.

Inconvenience will be minimised as much as possible and construction works that are particularly disruptive to traffic flows will be planned to occur outside of peak commute times.

Will the road be closed?

The road will need to be closed while the new asphalt is placed. During this time, traffic management will be in place, but some residents may need to use alternative parking for this short period of time.

Stage 1 and 2 Community engagement

We are initially consulting with residents who reside on the sections of road being upgraded for **Stage 1 Road Reconstruction**.

As the designs for **Stage 2 Traffic Calming** progress and we approach the construction phase residents will receive notification with more details about planned works and any potential impacts.
